NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards¹ was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau's technical work is performed by the National Measurement Laboratory, the National Engineering Laboratory, and the Institute for Computer Sciences and Technology.

THE NATIONAL MEASUREMENT LABORATORY provides the national system of physical and chemical and materials measurement; coordinates the system with measurement systems of other nations and furnishes essential services leading to accurate and uniform physical and chemical measurement throughout the Nation's scientific community, industry, and commerce; conducts materials research leading to improved methods of measurement, standards, and data on the properties of materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government Agencies; develops, produces, and distributes Standard Reference Materials; and provides calibration services. The Laboratory consists of the following centers:

Absolute Physical Quantities² — Radiation Research — Thermodynamics and Molecular Science — Analytical Chemistry — Materials Science.

THE NATIONAL ENGINEERING LABORATORY provides technology and technical services to users in the public and private sectors to address national needs and to solve national problems in the public interest; conducts research in engineering and applied science in support of objectives in these efforts; builds and maintains competence in the necessary disciplines required to carry out this research and technical service; develops engineering data and measurement capabilities; provides engineering measurement traceability services; develops test methods and proposes engineering standards and code changes; develops and proposes new engineering practices; and develops and improves mechanisms to transfer results of its research to the ultimate user. The Laboratory consists of the following centers:

Applied Mathematics — Electronics and Electrical Engineering² — Mechanical Engineering and Process Technology² — Building Technology — Fire Research — Consumer Product Technology — Field Methods.

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides scientific and technical services to aid Federal Agencies in the selection, acquisition, application, and use of computer technology to improve effectiveness and economy in Government operations in accordance with Public Law 89-306 (40 U.S.C. 759), relevant Executive Orders, and other directives; carries out this mission by managing the Federal Information Processing Standards Program, developing Federal ADP standards guidelines, and managing Federal participation in ADP voluntary standardization activities; provides scientific and technological advisory services and assistance to Federal Agencies; and provides the technical foundation for computer-related policies of the Federal Government. The Institute consists of the following divisions:

Systems and Software — Computer Systems Engineering — Information Technology.

¹Headquarters and Laboratories at Gaithersburg, Maryland, unless otherwise noted; mailing address Washington, D.C. 20234.

²Some divisions within the center are located at Boulder, Colorado, 80303.

Foreword

The National Standard Reference Data System was established in 1963 for the purpose of promoting the critical evaluation and dissemination of numerical data of the physical sciences. The program is coordinated by the Office of Standard Reference Data of the National Bureau of Standards but involves the efforts of many groups in universities, government laboratories, and private industry. The primary aim of the program is to provide compilations of critically evaluated physical and chemical property data. These tables are published in the *Journal of Physical and Chemical Reference Data*, in the NSRDS-NBS series of the National Bureau of Standards, and through other appropriate channels.

The task of critical evaluation is carried out in various data centers, each with a well-defined technical scope. A necessary preliminary step to the critical evaluation process is the retrieval from the world scientific literature of all papers falling within the scope of the center. Each center, therefore, builds up a comprehensive well-indexed bibliographical file which forms the base for the evaluation task. Bibliographies derived from these files are published when they appear to be of value to research workers and others interested in the particular technical area.

Further information on NSRDS and the publications which form the primary output of the program may be obtained by writing to the Office of Standard Reference Data, National Bureau of Standards, Washington, DC 20234.

David R. Lide, Jr., Chief
Office of Standard Reference Data

BIBLIOGRAPHY ON ATOMIC LINE SHAPES AND SHIFTS

(June 1975 through June 1978)

J. R. Fuhr, B. J. Miller, and G. A. Martin

This is the third supplement to the NBS Special Publication 366, *Bibliography on Atomic Line Shapes and Shifts (1889 through March 1972)*. It contains about 600 references and covers the literature from June 1975 through June 1978. As before, the bibliography contains five major parts: (1) All general interest papers are catalogued according to the broadening mechanisms (and, further, according to special topics under several of the mechanisms) and as to whether the work is a general theory, a general review, a table of profiles or parameters, a comment on existing work, a study of general experimental measurement techniques, or an experimental effort of general importance. Also included are selected papers on important applications of line broadening and on miscellaneous topics relating to atomic spectral line shapes and shifts. (2) In Part 2 all papers containing numerical data are ordered as to element, ionization stage, and broadening mechanism (in the case of foreign gas broadening the perturbing species are listed), and it is indicated whether the data are experimentally or theoretically derived. (3) While in the two preceding parts of the bibliography the references are listed for brevity by identification numbers only, in Part 3 all references are listed completely by journal, authors, and title and are generally arranged by year of publication and alphabetically by authors' names within the year. (4) This section contains a list of all authors and their papers. (5) A final section provides corrections or additions to the second supplement to the original bibliography.

Key words: Atomic; instrumental broadening; line shapes; line shifts; pressure broadening; resonance broadening; Stark broadening; van der Waals broadening.

A. INTRODUCTION

Since the publication of our latest *Bibliography on Atomic Line Shapes and Shifts (July 1973 through May 1975)*,¹ which is the second supplement to our original bibliography,² the number of articles containing numerical data, reviews, or comments of general interest has again increased sufficiently as to warrant a new supplement. The arrangement of the preceding bibliographies is generally retained. This third supplement, containing about 600 references, includes all new papers that were received in the

NBS library before June 30, 1978. A few recently collected articles, which were published prior to 1975, are listed in Part 3 under the year of publication. Since we feel that our collection of articles for the year 1975 is now reasonably complete, all references for that year have been renumbered for this supplement and are listed here with the new numbers. As in the previous supplements, we have provided an errata section, consisting of corrections and additions to Supplement 2 to the original bibliography. References to English translations of previously cited Russian articles are also listed in this final section.

¹ Fuhr, J. R., Martin, G. A., and Specht, B. J., *Bibliography on Atomic Line Shapes and Shifts (July 1973 through May 1975)*, Nat. Bur. Stand. (U.S.), Spec. Publ. 366, Suppl. 2, 75 pages (Nov. 1975).

² Fuhr, J. R., Wiese, W. L., and Roszman, L. J., *Bibliography on Atomic Line Shapes and Shifts (1889 through March 1972)*, Nat. Bur. Stand. (U.S.), Spec. Publ. 366, 165 pages (Sept. 1972).

We would like to express our sincere thanks to Dr. D. E. Kelleher, who helped in the selection and classification of the articles.

B. BIBLIOGRAPHICAL MATERIAL

1. LITERATURE REFERENCES OF GENERAL INTEREST

1.0. GENERAL ARTICLES ON LINE SHAPES AND SHIFTS (GENERAL THEORIES AND COMMENTS, ETC.)

Theoretical paper: 2551

1.1. PRESSURE BROADENING

Comment: 2527

Theoretical papers: 2526, 2528, 2587, 2626, 2642, 2664, 2665, 2721, 2728, 2780, 2842,
2900, 2910, 2957, 2965, 3000, 3013

1.1.1. Stark broadening and shifts

Comments: 2757, 2758, 2759, 2849

Theoretical papers: 2540, 2541, 2542, 2548, 2587, 2626, 2668, 2725, 2726,
2744, 2896, 2936, 2947, 2992, 3069, 3080

Combined theoretical-comment: 2659

1.1.1.1. Hydrogen and hydrogen-like (overlapping) lines

Comment: 3077

Experimental paper: 2847

Theoretical papers: 2478, 2539, 2572, 2574, 2575, 2606, 2620, 2836,
2856, 2883, 2913, 2920, 2984, 2987, 3065

1.1.1.2. Isolated lines of neutral spectra

Experimental paper: 2596

Theoretical papers: 2533, 3061

1.1.1.3. Isolated lines of ionic spectra

Comments: 2468, 2736

1.1.1.4. Topics of particular interest

A. Line wings

Comment: 2881

Experimental papers: 2670, 2953

Theoretical paper: 2572

B. Effects of collective electric fields

Comment: 2649

Experimental papers: 2567,2738,2811

Theoretical papers: 2635,2673,2819,3072

C. Asymmetries of hydrogenic lines

Experimental papers: 2718,2994

Theoretical papers: 2851,2878

D. Microfield distributions

Theoretical papers: 2473,2540,2560,2631,2646,2656,2725,
2734,2790,2813,2841,2883,2936,2967,
3007,3008,3015

E. Magnetic fields

Theoretical paper: 2772

F. Turbulent plasmas

Experimental paper: 2809

Combined theoretical-comment: 2659

G. Ion dynamics of hydrogenic lines

Experimental paper: 3056

Theoretical papers: 2766,2913,2967

Combined theoretical-comment: 3070

H. Plasma polarization shifts

Comment: 3080

Experimental paper: 2847

I. Stark effect on states above the ionization threshold

Theoretical paper: 2775

J. Small field limit; fine structure

Experimental papers: 2582,3063

K. Relativistic effects

Theoretical paper: 2794

1.1.2. van der Waals broadening

Comments: 2545,2586

Theoretical papers: 2472,2546,2547,2579,2638,2773,2780,2816,2886,2888,
2993,3074

Combined theoretical-comment: 2814

1.1.2.1. Satellite bands

Experimental papers: 2593,2613,2667,2706,2935,3016

Theoretical papers: 2579,2665,2815,2840,3047,3066,3074

1.1.2.2. Polarization effects

Theoretical papers: 2812,2980,3001

1.1.2.3. Fine structure; hyperfine structure

Theoretical papers: 2519,2520,2822,2887

1.1.3. Resonance broadening

Comment: 2562

Theoretical papers: 2482,2544,2647,2648,2660,2681,2833,2834,2876,2965,2976,3024

1.2. BASIC ARTICLES ON DOPPLER AND NATURAL LINE SHAPES

1.2.1. Doppler broadening and shifts

Comment: 2637

Experimental paper: 2749

Theoretical papers: 2524,2597,2616,2634,2654,2747,2777,2911,2938

1.2.2. Natural line broadening

No papers in this category.

1.2.3. Radiation induced broadening

Experimental papers: 2535,2675,2676,2740,2783,2793,2904,2918

Theoretical papers: 2474,2534,2606,2607,2617,2876,2877,2955

Combined theoretical-experimental: 3057

1.3. BASIC PAPERS ON INSTRUMENTAL BROADENING, DECONVOLUTION, SUPERPOSITION OF TWO OR MORE SIMULTANEOUSLY ACTING BROADENING MECHANISMS

1.3.1. Determination of instrumental line profiles; experimental techniques for determining line shapes

Experimental papers: 2118,2471,2477,2589,2592,2739,2787,2825,2903

Theoretical papers: 2465,2639,2722,2741,2765,2781,2835,2898,2962,3071

Combined theoretical-experimental: 1245,2114

1.3.2. Deconvolution

Theoretical papers: 2674,2741,2786,2797,2806,2824,2831,2839,2891,2898,2962,3011,3060,3081

Combined theoretical-experimental: 2591,2961

1.3.3. Superposition of broadening mechanisms

Theoretical papers: 2544,2563,2597,2640,2641,2683,2732,2742,2747,2761,2818,2843,2877,2906,2911,2927,2946,2970,2985,2988,3048,3054,3067

1.3.4. Two-photon and saturation methods

Experimental paper: 2582

Theoretical papers: 2598,2720,2721

1.4. IMPORTANT LINE BROADENING APPLICATIONS

1.4.1. Laser & maser applications

Experimental papers: 2513,2535,2675,2676,2705,2738,2740,2783,2793,
2819,2828,2904,2918,2968,2998,3073

Theoretical papers: 2530,2534,2576,2606,2877,2887,2907,2955,2956,
2957,3014,3069

Combined theoretical-experimental: 2707,2717,2826,2850,2897,3057

1.4.2. Astrophysical applications

Comment: 2986

Experimental paper: 2743

Theoretical papers: 2577,2612,2621,2638,2808,2827,2831,2880,3012,3048,
3054

Combined theoretical-comments: 2708,3006

Combined theoretical-experimental: 2792

1.4.3. Plasma diagnostics

Experimental papers: 2305,2316,2317,2319,2464,2610,2611,2627,2662,
2670,2711,2713,2714,2718,2745,2752,2846,2902,
2912,2974,2995,2998,3021,3023,3059

Theoretical papers: 2600,2709,2751,2884

Combined theoretical-experimental: 2466,2717,2769,2832

1.4.4. Other applications

Combined theoretical-comment: 2557

1.5. OTHER TOPICS INVOLVING LINE SHAPES AND SHIFTS

1.5.1. The line shape in the presence of self-absorption; effects of radiative transfer

Theoretical papers: 2506,2524,2590,2625,2671,2843,2844

Combined theoretical-experimental: 2583,2949,2961

1.5.2. Broadening of scattered radiation

Experimental paper: 2555

Theoretical papers: 2524,2981

Combined theoretical-experimental: 2897

1.5.3. Some important papers on molecular line broadening

Theoretical papers: 2485,2568,2724,2728,2764,2829,2900,2921,2926,2932,
2946,2964,2971,3010,3052,3060

1.5.4. Miscellaneous topics

A. Broadening of x-ray lines

Experimental paper: 2853

B. Light shifts; relaxation

Experimental papers: 2511,2605,2918,3023

Theoretical papers: 2508,2554,2558,2905,2979

Combined theoretical-experimental: 2463,2509

C. Zeeman broadening

Experimental paper: 2937

Theoretical paper: 2577

D. New anomalous redshifts

Theoretical paper: 2799

1.6. REVIEW ARTICLES

1.6.1. General line broadening reviews: 2826

16. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.) <u>This is the third supplement to the NBS Special Publication 366, Bibliography on Atomic Line Shapes and Shifts (1889 through March 1972). It contains about 600 references and covers the literature from June 1975 through June 1978. As before, the bibliography contains five major parts: (1) All general interest papers are catalogued according to the broadening mechanisms (and, further, according to special topics under several of the mechanisms) and as to whether the work is a general theory, a general review, a table of profiles or parameters, a comment on existing work, a study of general experimental measurement techniques, or an experimental effort of general importance. Also included are selected papers on important applications of line broadening and on miscellaneous topics relating to atomic spectral line shapes and shifts. (2) In Part 2 all papers containing numerical data are ordered as to element, ionization stage, and broadening mechanism (in the case of foreign gas broadening the perturbing species are listed), and it is indicated whether the data are experimentally or theoretically derived. (3) While in the two preceding parts of the bibliography the references are listed for brevity by identification numbers only, in Part 3 all references are listed completely by journal, authors, and title and are generally arranged by year of publication and alphabetically by authors' names within the year. (4) This section contains a list of all authors and their papers. (5) A final section provides corrections or additions to the second supplement to the original bibliography.</u>				
17. KEY WORDS (six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons) Atomic; instrumental broadening; line shapes; line shifts; pressure broadening; resonance broadening; Stark broadening; van der Waals broadening.

NBS TECHNICAL PUBLICATIONS

PERIODICALS

JOURNAL OF RESEARCH—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology, and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent NBS publications in NBS and non-NBS media. Issued six times a year. Annual subscription: domestic \$17.00; foreign \$21.25. Single copy, \$3.00 domestic; \$3.75 foreign.

Note: The Journal was formerly published in two sections: Section A "Physics and Chemistry" and Section B "Mathematical Sciences."

DIMENSIONS/NBS

This monthly magazine is published to inform scientists, engineers, businessmen, industry, teachers, students, and consumers of the latest advances in science and technology, with primary emphasis on the work at NBS. The magazine highlights and reviews such issues as energy research, fire protection, building technology, metric conversion, pollution abatement, health and safety, and consumer product performance. In addition, it reports the results of Bureau programs in measurement standards and techniques, properties of matter and materials, engineering standards and services, instrumentation, and automatic data processing.

Annual subscription: Domestic, \$11.00; Foreign \$13.75

NONPERIODICALS

Monographs—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a world-wide program co-ordinated by NBS. Program under authority of National Standard Data Act (Public Law 90-396).

NOTE: At present the principal publication outlet for these data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St. N.W., Wash., D.C. 20056.

Building Science Series—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The purpose of the standards is to establish nationally recognized requirements for products, and to provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order above NBS publications from: Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Order following NBS publications—NBSIR's and FIPS from the National Technical Information Services, Springfield, Va. 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NBS Interagency Reports (NBSIR)—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Services (Springfield, Va. 22161) in paper copy or microfiche form.

BIBLIOGRAPHIC SUBSCRIPTION SERVICES

The following current-awareness and literature-survey bibliographies are issued periodically by the Bureau:

Cryogenic Data Center Current Awareness Service. A literature survey issued biweekly. Annual subscription: Domestic, \$25.00; Foreign, \$30.00.

Liquified Natural Gas. A literature survey issued quarterly. Annual subscription: \$20.00.

Superconducting Devices and Materials. A literature survey issued quarterly. Annual subscription: \$30.00. Send subscription orders and remittances for the preceding bibliographic services to National Bureau of Standards, Cryogenic Data Center (275.02) Boulder, Colorado 80302.
